BRENT BUMANN

Brent.bumann6@gmail.com | 650 580 6605 | https://www.linkedin.com/in/brent-bumann/

Software Engineer (Full Stack)

Product-focused software engineer with 4+ years of experience owning frontend-heavy, full-stack systems and self-serve platforms used at enterprise scale across email, web, and mobile.

Professional Overview

Technical Proficiencies:
Frontend: React, Redux, JavaScript, TypeScript, HTML/CSS, Ember
Backend: Ruby on Rails, Python, Go
Data & Infra: PostgreSQL, MongoDB, AWS, S3

MOVABLE INK | 03/2025 - 02/2026
Frontend Software Engineer
Frontend-focused engineer on the **Tactics** team, responsible for designing and delivering self-serve campaign tooling that enabled enterprise customers to independently launch email, web, and mobile experiences.

- → ***Contributed to the early architecture and direction*** *of Tactics, helping define how YAML-based blueprints and package manifests translated into dynamic configuration UI within the Designer canvas.*
- → *Worked across* ***React (v16–19), Ember, and TypeScript/JavaScript****, navigating multiple generations of frontend architecture while maintaining consistency and reliability in customer-facing workflows.*
- → *Partnered closely with product, design, and backend engineers to* ***scope features, assess technical tradeoffs, and guide implementations from early access through GA.***
- → ***Participated in post-GA support rotations,*** *diagnosing cross-system issues spanning frontend preview logic, backend validation, and rendering services.*

Selected Project: Animated GIF Support (End-to-End Ownership):

- → ***Owned animated GIF support end-to-end,*** *from initial research and RFC authorship through implementation, coordination, and rollout.*
- → *Designed rendering behavior that distinguished* ***image-based vs HTML-based environments****, enabling correct GIF playback in web and mobile while preserving cacheable static renders for email.*
- → *Drove coordinated changes across frontend preview logic,* ***TypeScript-based rendering services, and Rails backend validation layers.***
- → *Added an "is_animated" flag to backend models and* ***designed a safe backfill strategy across ~9M Static Pic records****, accounting for S3-hosted assets and production performance constraints.*
- → *Proactively mitigated* ***scale and cost risks*** *by preventing per-frame dynamic rendering of GIFs, preserving caching guarantees during peak-traffic events (e.g., Black Friday-scale volumes).*

DROPBOX | 09/2019 – 05/2023
Software Engineer
Worked on cross-functional full-stack projects to develop front-end pages and back-end services that support critical user flows, integrating Dropbox's APIs with external services.

- → ***Led full-stack initiatives within the Developer Platform,*** *improving how third-party developers configured and integrated with Dropbox APIs.*
- → ***Redesigned the API app creation and permission management flow in the Developer Console,*** *integrating React with legacy Pyxl infrastructure to deliver a modern, scalable UX.*
- → ***Implemented OAuth 2.0 and OpenID Connect features,*** *balancing developer flexibility with platform security at scale.*
- → *Built backend services in* ***Python and Go****, collaborating cross-functionally to maintain backward compatibility and platform reliability.*
- → ***Improved performance and stability for high-volume integrations*** *(e.g., Slack) by addressing API rate limits and optimizing data-fetching strategies.*

BEST BUY CO. | 06/2017 – 12/2018
Computing Team Leader
Led and mentored a team of associates, translating customer needs into tailored technical solutions. Consistently ranked in the top 3% District wide, driving $30K-$60K in monthly sales through consultative, customer-first selling.

PROJECTS

Carro *(Rails, ReactJS, PostgreSql)*

A pixel-perfect clone of Turo that uses SQL database, Rails backend, React frontend with CSS/SASS.

- → **Developed a Turo clone using Rails and React**. Leveraged React to create dynamic, interactive components, with Redux for state management. Used TypeScript to enhance type safety and align with modern JavaScript best practices.
- → **Optimized App scalability by storing content uploaded by users in AWS S3**, a cloud-based platform.

P.A.R.C. *(MongoDB, Express.js, ReactJS, Node.js)*

"Parking at Residential Communities" uses MongoDB, Express.js, React.js, Node.js.

- → **Built a full-stack web application using MERN stack** (MongoDB, Express, React, Node) with geolocation and custom search functionality. Incorporated RESTful APIs to fetch listing data based on user input, improving UX by integrating Google Maps API and adding real-time data updates.

EDUCATION & PROFESSIONAL DEVELOPMENT

University of California | *Human Biology, 2016*
AppAcademy | Web Development Training Program, 2019
